

## Key dates:

- Project report Part 1, April 22, 11:59pm (10 points)
- Team presentation on May 9, 9am (10 points)
- Project feedback for others, May 9, 9am (10 points)
- Project Report May 10, 11:59pm (30 points)
- Various progress reports (TBD)

Team member names, goals for project/class, background (relevant skills, interest):

Name	Goal(s)	Skills and interest
Ahmed Khan	World Domination Learning to make complete apps	got, program flow / architecture interested in machine learning
Adam Freed	Learning how data structures and algorithms work.	python, concepts / planning, testing interested in machine learning
Garvin Silva	Become a more efficient programmer and take $O(n)$ considerations	Proof reading, debugging

How will your reliably communicate with each other?

Discord

What are the compatible times for everyone to work together? List as many days/times as possible

Day (e.g. Fridays)	Times (e.g. right after class)	Known restrictions
Thurs	After 3pm	Ahmed B/dol 4:40-6
Fri	All	Adam 2:30-4 DEs
Sat	All	none
Sun	All	none

Which of these characteristics of an effective team does your team have? (The more the better.)

- |   |   |
|---|---|
| <input checked="" type="checkbox"/> Open and frequent communication   | <input checked="" type="checkbox"/> Support and trust among the members |
| <input checked="" type="checkbox"/> Unified focus on team goal        | <input type="checkbox"/> Organization of project tasks                  |
| <input checked="" type="checkbox"/> All members engage and contribute | <input type="checkbox"/> Add your own: _____                            |

## Team Project first tasks:

1. Team name. Explain significance or rationale.

~~Chad GPT~~ or ~~OpenAI Why~~  
or Skynet

(AI will change the world and cause massive disruption)

2. Which UNSDG(s) or other goals is your team interested in? List out the ones you consider. And then choose one, explaining why.

Adam: Equality for women, Environmental Conservation

Gavin: Environmental Conservation

Ahmed: Protecting Children in warzones (ex. Ukraine)

Plan: Environmental conservation map program

3. Start preliminary brainstorming. What are some possible (2? 3?) ideas?

GUI map with clock to place waypoints that can be organized and ranked with data structures. Keyboard search to find specific waypoint or coordinate, focused on environment

4. Which of the above projects resonates with you the most? Which seems most viable?

We found a common thread between our 3 UNSDG's and made a project idea about it

The commonality was the idea of a map and how to inform the user with tools about the map of a region.
